

## Amendments to the Claims

Sub C1

1. (Currently Amended) A ~~moving image and audio~~ transmitter for transmitting at least one of a moving image and an audio signal to a communication terminal, said transmitter comprising:

a) a moving image compression coder for ~~compression~~ compressing and coding the a moving image signal output from a moving image input unit;

b) an audio compression coder for compressing and coding the audio signal;

c) a radio transmitting unit for transmitting the moving image data signal compressed and coded in the said moving image compression coder, and the audio data ~~compression-coded~~ compressed and coded in the said audio compression coder;

d) an audio output unit for outputting the audio signal; and

e) an audio output instructing unit for determining a ~~selection on~~ whether to transmit the audio signal by said radio transmitting unit or to output the audio signal by in said audio output unit, as a selection, depending on a distance between said the moving image and audio transmitter and said the communication terminal, wherein the distance is obtained based on a field strength of a radio wave transmitted from the communication terminal.

2. (Currently Amended) The ~~moving image and audio~~ transmitter of claim 1, wherein said audio output instructing unit controls a compression rate of said moving image compression coder depending on the selection.

3. (Currently Amended) The ~~moving image and audio~~ transmitter of claim 1, wherein said audio output instructing unit detects contact of said ~~moving image and audio~~ transmitter with the said communication terminal, and i) ~~instructs~~ determines the a selection of audio, and ii) controls a compression rate of said moving image compression ~~compressing~~ coder.

4. (Currently Amended) The ~~moving image and audio~~ transmitter of claim 2, wherein said audio output instructing unit detects contact of said ~~moving image and audio~~ transmitter with the said communication terminal, and i) ~~instructs a~~ determines the selection of audio, and ii) controls the compression rate of said moving image compression coder.

Claims 5 and 6 (Currently Canceled)

7. (Currently Amended) The ~~moving image and audio~~ transmitter of claim 1, further comprising:

a field strength detector for measuring the a field strength of the radio wave transmitted from the communication terminal,

wherein said audio output instructing unit determines ~~instructs~~ the selection according to the measured field strength ~~a measuring result~~ of said field strength detector.

8. (Currently Amended) The ~~moving image and audio~~ transmitter of claim 2, further comprising:

a field strength detector for measuring the a field strength of the radio wave transmitted from the said communication terminal,

wherein said audio output instructing unit determines ~~instructs~~ the selection according to the measured field strength ~~measuring result~~ of said field strength detector.

9. (Currently Amended) A portable display terminal for communicating with a communication terminal; and receiving at least one of moving image data and audio data, said portable display terminal comprising:

a) a radio receiving unit for receiving compression-coded moving image data and compression-coded audio data;

b) a moving image decoder for decoding the compression-coded moving image data received in said radio receiving unit;

c) a display unit for displaying an ~~the~~ image according to the moving image data decoded by said moving image decoder;

d) an audio decoder for decoding the compression-coded audio data received in said radio receiving unit as an audio signal;

e) an audio output unit for issuing the audio signal decoded by said audio decoder; and

f) an audio output determining unit for determining and controlling whether or not to output the audio signal from said ~~the~~ audio output unit, depending on a distance between said portable display terminal ~~moving image and audio transmitter~~ and the communication terminal, wherein the distance is obtained based on a field strength of a radio wave transmitted from the communication terminal.

10. (Currently Amended) The portable display terminal of claim 9,  
wherein said audio output determining unit includes an audio output instructing command transmitter for transmitting an ~~the~~ output instructing command to designate an output destination of the audio signal at the communication terminal, to the communication terminal.

11. (Original) The portable display terminal of claim 10,  
wherein said audio output determining unit is a changeover switch.

12. (Currently Amended) The portable display terminal of claim 10, further comprising:  
a field strength detector for measuring a ~~the~~ field strength of the radio wave transmitted from the said communication terminal,

wherein said audio output determining unit determines an ~~the~~ output destination of the audio signal at the said communication terminal according to the measured field strength of said field strength detector.

13. (Currently Amended) A wireless ~~moving image and audio~~ transmitting system for communicating information including at least one of moving image data and audio data, said wireless transmitting system comprising:

1) a ~~moving image and audio~~ transmitter; and

2) a portable display terminal for communicating with said ~~moving image and audio~~ transmitter and receiving at least one of the moving image data and the audio data,

wherein said ~~moving image and audio~~ transmitter comprises:

a) a moving image compressing coder for compressing and coding a moving image signal output from a moving image input unit as the moving image data,

b) an audio compressing coder for compressing and coding an audio signal as the audio data,

c) a radio transmitting unit for transmitting the moving image data compressed and coded in the said moving image compressing coder, and the audio data compressed and coded in the said audio compressing coder,

d) an audio output unit for issuing the audio signal, and

e) an audio output instructing unit for determining ~~a selection on~~ whether to transmit the audio signal by the said radio transmitting unit or to output the audio signal by said in the audio output unit, as a selection, depending on a distance between ~~the moving image and audio~~ said transmitter and the said portable display terminal, wherein the distance is obtained in said transmitter, and

said portable display terminal comprises:

a) a radio receiving unit for receiving the compression-coded moving image ~~data~~ signal and compression-coded audio ~~data~~ signal,

b) a moving image decoder for decoding the compression-coded moving image ~~data~~ signal received in said radio receiving unit,

c) a display unit for displaying ~~the~~ an image according to the moving image ~~data~~ signal decoded by said moving image decoder,

d) an audio decoder for decoding the compression-coded audio ~~data~~ signal received in said radio receiving unit, and

e) an audio output unit for issuing the audio signal decoded by said audio decoder, the distance being obtained based on a field strength of a radio wave transmitted from said portable display terminal and

f) ~~an audio output determining unit for determining whether or not to output the audio signal from the audio output unit, depending on the distance between said moving image and audio transmitter and the portable display terminal.~~

14. (Currently Amended) The wireless ~~moving image and audio~~ transmitting system of claim 13,

wherein said audio output instructing unit controls a compression rate of said ~~the~~ moving image compressing coder depending on the selection.

15. (Currently Amended) The wireless ~~moving image and audio~~ transmitting system of claim 13,

wherein said audio output instructing unit detects contact of said ~~the moving image and audio~~ transmitter with said ~~the~~ portable display terminal, determines the and i) instructs selection of audio, and ii) controls a compression rate of said ~~the~~ moving image compressing coder.

Claim 16 (Currently Cancelled)

17. (Currently Amended) The wireless ~~moving image and audio~~ transmitting system of claim 13,

wherein said ~~moving image and audio~~ transmitter further comprises:

a field strength detector for measuring the field strength of the radio wave transmitted from ~~the~~ said portable display terminal, and

said audio output instructing unit ~~instructs~~ determines the selection according to the ~~measuring result~~ measured field strength of said field strength detector.

Claims 18-20 (Currently Cancelled)

21. (New) A transmitter for transmitting at least one of a moving image and an audio signal to a communication terminal, said transmitter comprising:

a moving image compression coder for compressing and coding a moving image signal output from a moving image input unit;

an audio compression coder for compressing and coding the audio signal;

a radio transmitting unit for transmitting the moving image signal compressed and coded in said moving image compression coder, and the audio data compressed and coded in said audio compression coder;

an audio output unit for outputting the audio signal; and

an audio output instructing unit for selecting whether to transmit the audio signal by said radio transmitting unit or to output the audio signal by said audio output unit, as a selection, depending on a distance between said transmitter and the communication terminal, wherein the distance is obtained based on a field strength of a radio wave transmitted from said transmitter.

22. (New) The moving image and audio transmitter of claim 21, further comprising:

an audio output instructing command receiver for receiving an audio output instructing command from the communication terminal,

wherein said audio output instructing unit selects the selection according to the audio output instructing command received in said audio output instructing command receiver.

23. (New) The transmitter of claim 22,

wherein said audio output instructing unit controls a compression rate of said moving image compression coder depending on the selection.

24. (New) The transmitter of claim 23, further comprising:

an audio output instructing command receiver for receiving an audio output instructing command from the communication terminal,

wherein said audio output instructing unit selects the selection according to the audio output instructing command received in said audio output instructing command receiver.

25. (New) A wireless transmitting system for communicating information including at least one of moving image data and audio data, said wireless transmitting system comprising:

a transmitter; and

a portable display terminal for communicating with said transmitter and receiving at least one of the moving image data and the audio data,

wherein said transmitter comprises:

a moving image compressing coder for compressing and coding a moving image signal output from a moving image input unit as the moving image data,

an audio compressing coder for compressing and coding an audio signal as the audio data,

a radio transmitting unit for transmitting the moving image data compressed and coded in said moving image compressing coder, and the audio data compressed and coded in said audio compressing coder,

an audio output unit for issuing the audio signal, and

an audio output instructing unit for selecting whether to transmit the audio signal by said radio transmitting unit or to output the audio signal by said audio output unit, as a selection, depending on a distance between said transmitter and said portable display terminal, wherein the distance is obtained in said portable display terminal, and

said portable display terminal comprises:

a radio receiving unit for receiving the compression-coded moving image signal and compression-coded audio signal,

a moving image decoder for decoding the compression-coded moving image signal received in said radio receiving unit,

a display unit for displaying an image according to the moving image signal decoded by said moving image decoder,

an audio decoder for decoding the compression-coded audio signal received in said radio receiving unit,

an audio output unit for issuing the audio signal decoded by said audio decoder, and

an audio output determining unit for determining and controlling whether or not to output the audio signal from said audio output unit, depending on the distance between said transmitter and said

portable display terminal, wherein the distance is obtained based on a field strength of a radio wave transmitted from said transmitter.

26. (New) The wireless transmitting system of claim 25,

wherein said transmitter further comprises:

an audio output instructing command receiver for receiving an audio output instructing command from said portable display terminal, and

said audio output instructing unit determines the selection according to the audio output instructing command received in said audio output instructing command receiver.

27. (Currently Amended) The wireless transmitting system of claim 25,

wherein said audio output determining unit of said portable display terminal further comprises:

an audio output instructing command transmitter for transmitting an output instructing command to designate an output destination of the audio signal to said transmitter.

28. (New) The wireless transmitting system of claim 27,

wherein said audio output determining unit is a changeover switch.

29. (New) The wireless transmitting system of claim 27,

wherein said portable display terminal further comprises:

a field strength detector for measuring the field strength of the radio wave transmitted from said transmitter,

wherein said audio output determining unit determines an output destination of the audio signal according to the measured field strength of said field strength detector.
